

Note: Numbers are according to the **Functionality to be Ported** section.

1. Get Request

Error is thrown when user id is not found.

2. Post Request. Postman is used to test out the post request.

If error is found error message is thrown like on the second pic.

The screenshot shows the Postman interface for a POST request to `http://127.0.0.1:8000/add_comment`. The request is configured with the following body data:

KEY	VALUE	DESC
<input checked="" type="checkbox"/> id	2	
<input checked="" type="checkbox"/> password	720DF6C2482218518FA20FDC52D4DED7ECC...	
<input checked="" type="checkbox"/> comments	This is a test comment	
Key	Value	Desc

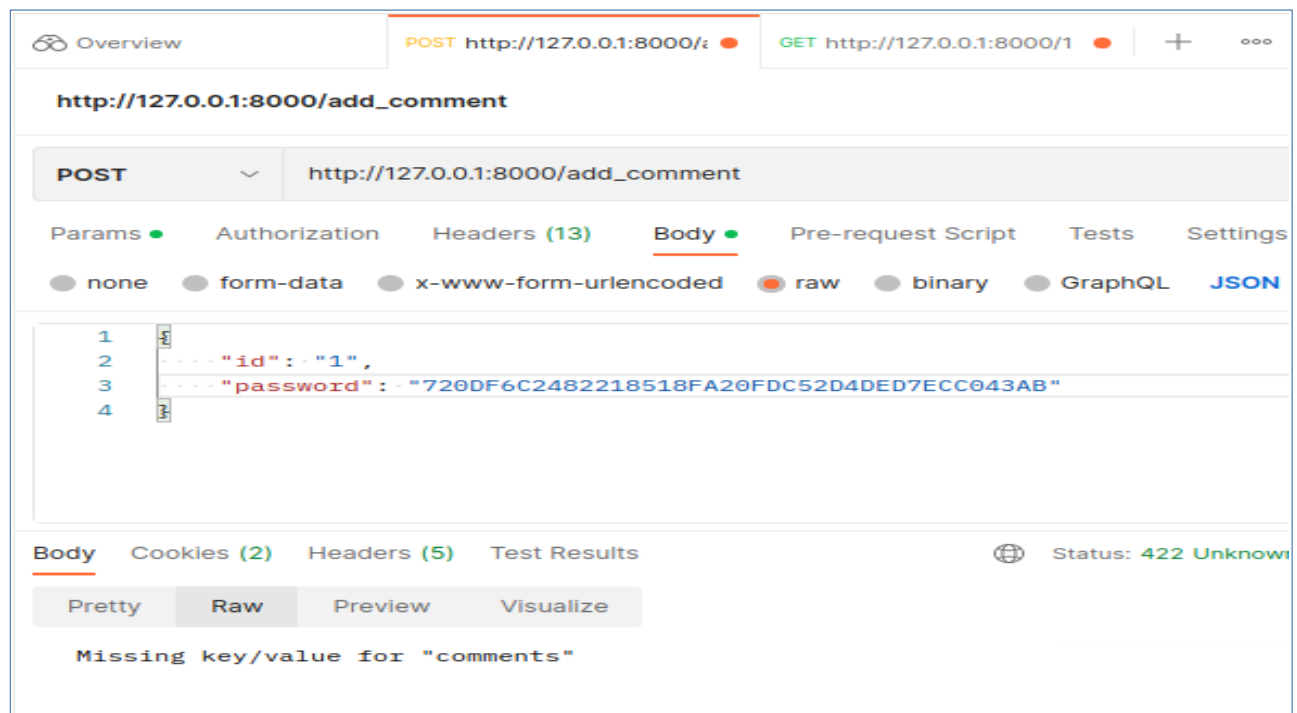

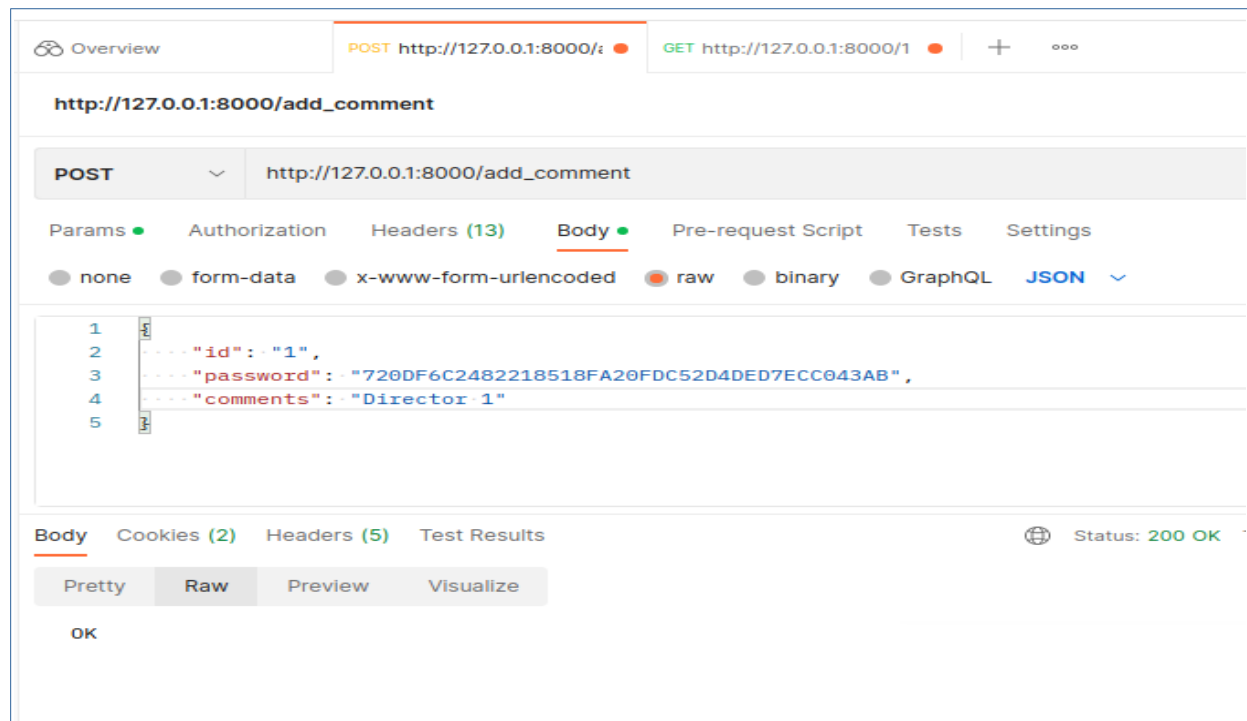

The status bar at the bottom indicates **Status: 200 OK**. The response body is displayed as `OK`.

The screenshot shows the Postman interface for a POST request to `http://127.0.0.1:8000/add_comment`. The request is configured with the following body data:

KEY	VALUE	DESC
<input checked="" type="checkbox"/> id	2	
<input checked="" type="checkbox"/> password	wrong password	
<input checked="" type="checkbox"/> comments	This is a test comment	
Key	Value	Desc

The status bar at the bottom indicates **Status: 401 Unauthorized**. The response body is displayed as `Invalid password`.

3. Post JSON Object. Same as number 2, postman is used for testing.

In the second pic comment field is missing in the json object so it throws this 'Missing key/value for "comments"' error.

4. For the custom artisan command. The file is found at Console\Commands\AddComment.php.
To use this type “php artisan make:comment {id} {comment}”

```
kevin@FleximizeDev-07:/var/www/html/picturework$ php artisan make:comment 2 "Comment has been changed"
OKkevin@FleximizeDev-07:/var/www/html/picturework$
```

```
SELECT * FROM `users` WHERE `id` = '2' LIMIT 50 (0.000 s) Edit
```

<input type="checkbox"/> Modify	id	name	comments ↓ =
<input type="checkbox"/> edit	2	W2IkHM lAlcZauzW3z3V	Comment has been changed

```
kevin@FleximizeDev-07:/var/www/html/picturework$ php artisan make:comment 100 "Comment has been changed"
user id 100 was not found in the database.kevin@FleximizeDev-07:/var/www/html/picturework$
```

If for example the user is not found it return error message. Example on pic 3 user id 100 is not found.

5. Native url behavior.

Route::get('/{id?}', [UserController::class, 'getUser']); for routes.

6. Migration and seeder files.

```
▼ database
  ► factories
  ▼ migrations
    2022_09_16_132938_users.php
  ▼ seeders
    DatabaseSeeder.php
    UserSeeder.php
```

7. Documentation

Comments on functions and single line comments are provided.

documentation.txt is also included containing the parameters routes used.
